

# Waste Water Engineer

## Salary £28-35K + Company Vehicle + Overtime

The role is to work within our long established core department of Waste Water. A high level of enthusiasm, willingness to learn new systems and technology, and a good understanding of mechanical and electrical principles is required.

### The successful candidate will:

- Carry out servicing and installation works in a safe and efficient manner
- Attending site promptly as instructed
- Providing feedback to the office from works carried out
- Ordering materials as required for remedial works
- Promoting a positive image of the company when on-site
- Providing accurately completed certification to the office in a timely manner

The ideal candidate should be able to demonstrate the following:

- Any relevant mechanical or electrical qualifications
- Experience of commercial mechanical and electrical maintenance and installation works
- Knowledge of various different mechanical and electrical tasks, as well as pumps, pipework and controls
- Managing time effectively
- Completing paperwork in a timely manner with a high attention to detail

A full driving licence is essential.
